

Dr.

My annual breast exam is never something that I look forward to, but I was pleased to learn about the new FDA approved Breast CT imaging technology. It provides a true 360° view of the breast, with excellent clarity of the tissue, even within dense breasts (as opposed to the indeterminate test results that so many of us too often get). Two added bonuses:

1. **No compression**, so the Breast CT scan is a painless way of obtaining breast imaging
2. Very **low radiation** exposure

Insurance should cover my Breast CT Scan, as I believe that my symptoms match those which are assigned to at least one of the six CPT codes that have been issued by the American Medical Association. These codes are recognized by Blue Cross Blue Shield of Alabama, [as indicated on their BCBS website](#). Please see the attached letter from the Breast CT provider, [Medical Imaging Systems](#), for further information, and complete the attached Physician's Order form so that I can call 205-877-2254 to schedule my Breast CT scan at Brookwood Baptist Health.

Your Patient,
